## Air Cooled Split Package Unit

Sabro has over 50 years of experience on ASU systems.

Modernization & Sophistication of workplaces & industries with massive urbanization has led to a hyper demand for a more holistic approach towards air conditioning.

Units that are engineered with bi-dimensional capabilities, possessing the potential of simultaneously cooling & heating, adaptability to different seasons and varied temperature comfort levels of different spaces within single premises.

Sabro Split Packaged units have always remained popular choice amongst users primarily because they are easy to install and allow cost effective maintenance.

Air-cooled Split packaged systems at Sabro have been distinctively designed having a great regard of our customers' requirement. We at sabro understand that customers want to save time, money & space all of which have been our guiding design & production imperatives, carefully crafting our Air-cooled Split packaged Units to make sure that our ready-made product becomes your tailored solution.

We are also applying our ingenuity to make our products as environmental friendly as possible, with simple effective control over air conditioning units to avoid unnecessary/unhygienic energy wastage.

**Standard Range: 3.3 RT to 42.25 RT**

**Custom Make: Up to 150 RT**

## Equipment Features

Sabro

### Economy, Efficiency And Comfort

- Scroll Compressors, a relatively new technology, has proven to more efficient and economical than conventional compressors in refrigeration/electrical usage.
- Factory tested and refrigerant charged at site.
- Intelligent space utilization, in both high rise and conventional buildings.

### Improved Indoor Air Quality

- Pre-filter option, Recycling of dust free air leading to more healthy & hygienic environment.

### Noise Reduction

- Specialized design and structural quality.
- Heavy -gauge metal and welded construction to minimize vibrations.
- Statically and dynamically balanced fans

### Designed And Manufactured For Longevity

- Convenient access to all parts and maintenance/services need.
- Adjustable(belt drive) centrifugal evaporator fan, enabling fan RPM to be increased or decreased.
- Multiple circuits to maintain required temperatures i.e. allowing great deal of precision in cooling (Selected models only).
- Available in wide range of models from 3.75 Hp to 50 Hp to suite individual area requirement.

**Casing Material**

Units are made from Galvanized fine steel sheets, degreased, de-rusted, phosphate coated and finished electro statically with powder paint which is then baked. This results in excellent corrosion resistance which ensures long lasting life of units.

**Compressor**

Sabro has always placed sole reliance on Copeland® compressors, one of the most well reputed and reliable manufacturers in the world. All ASU units consist of scroll compressors. Each compressor is provided with completely independent refrigerant circuits.

**Evaporator-Fan And Motor**

Statically and dynamically balanced for noiseless and laminar flow, All ASU units consist of forward curved centrifugal fans. These fans are belt driven using 1 or 2 "V" belts with fan pulleys combination(mounted on shafts), that are provided with permanently lubricated ball-bearings.

**Condenser-Fan And Motor**

The Condenser fans are made up of propeller type blades which are made up of heavy gauge aluminum material. The fans are statically&dynamically balanced for laminar flow enabling low noise operations. The fan motors have class F insulation and IP-55 protection.

**Evaporator Coil**

The evaporator-coil is made up of seamless copper-tubes that are mechanically expanded to ensure rigid contact with fins to ensure greater heat-transfer efficiency. It is tested under water with nitrogen gas at a gauge pressure of 250 Psi against leakage.

**Condenser Coil**

The condenser coil is made up of seamless copper-tubes and aluminum plate fins. It is tested under water with nitrogen gas at a gauge pressure of 450 Psi against leakage.

## Components Details

Sabro

### Air-Filter

2-inch thick washable aluminum media air filters are used in these units.

### Electrical Control Panel

Mounted inside the condenser section, the electrical control panel consists of power monitor, magnetic contactors, thermal overload relays and fuses etc. Control panel is provided with hinged door with lock and can be made available for remote installation in the field on request.

### Operational Switches And Thermostat

ASU units are provided with electronic thermostats with LCD display, detailing unit's operating status.

**Compressor Internal Protector**

Protects the compressor motor winding from overheating.

**Power Monitor**

P.M Monitors voltage fluctuations. It stops the unit from operating at high/low voltage or wrong phase sequence/phase reversal.

**Compressor Over-Load Relay**

It Protects the compressor by switching it OFF at higher than required current.

**Low And High Pressure Switches**

These switches are used to protect the compressor from any damage due to abnormal suction/discharge pressure.

**Evaporator And Condenser Fan Motor Over-Load Relays**

To protect the evaporator as well condenser fan motor from over current operation.

## Optional Accessories

Sabro

### Pressure Gauge

Visual representation depicting the compressor's operating conditions, using high and low refrigerant pressure.

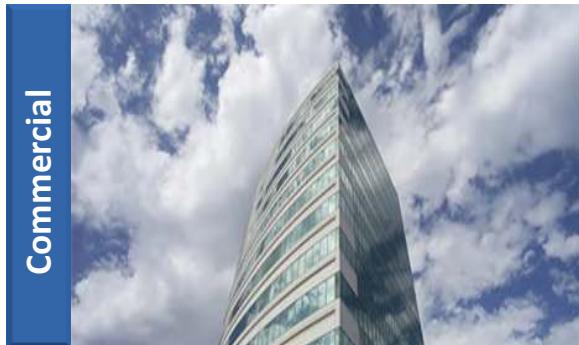

### Acrylic Protective Coating

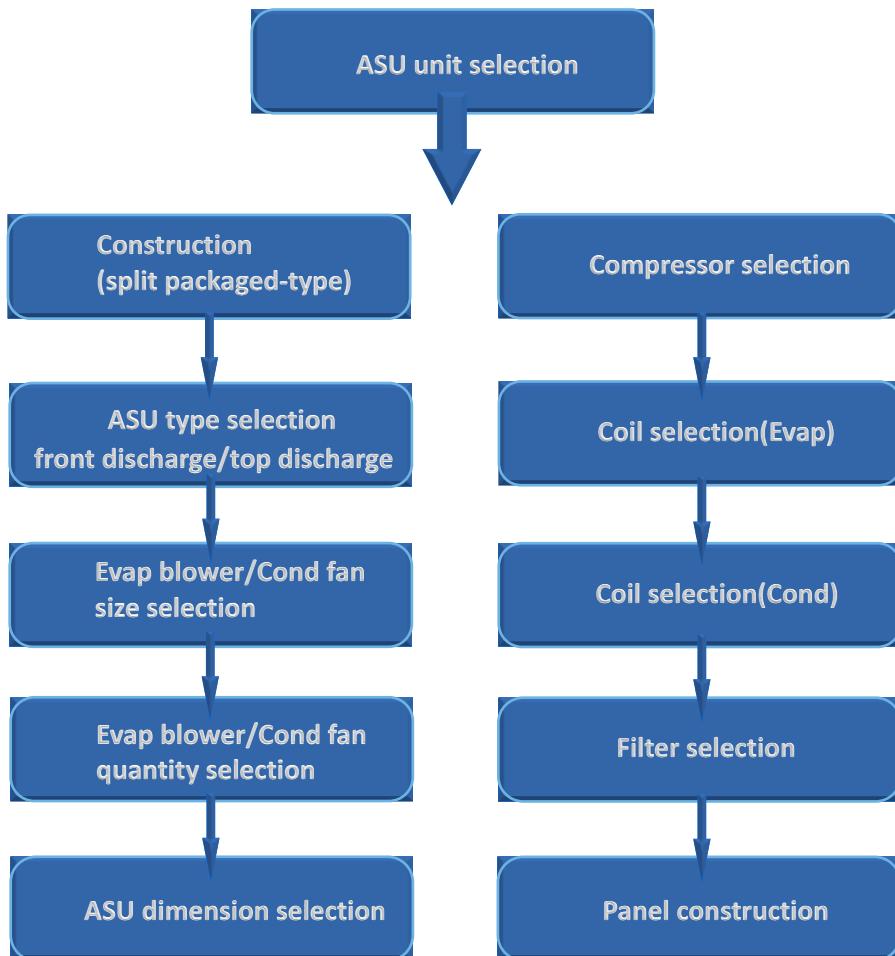

On condenser coil a protective coating of acrylic resin is used to prolong its life in sea-line areas.

### Low-Ambient Control

A safety device that shifts the condenser fan motor ON & OFF, the aim is to keep the head pressure elevated during low ambient temperatures.

Commercial

### Note:

The above Specification are based on ARI conditions:

Evaporator Entering Air Temperature =80.0 °F (26.6 °C) DB, & 67 °F (19.5 °C) WB.

Condenser Entering Air Temperature = 95.0 °F (35 °C) DB.

\*Both interconnecting Piping in this mode is required to be insulated due to refrigerant control in out door unit

**C.F.M** = Air Flow Rate    **E.S.P** = External static Pressure    **R.L.A**= Rated load amps

\*TXV-Thermostatic Expansion Valve

### Refrigerant Piping

Air cooled split units are in two parts;

Outdoor section of unit & Indoor section of unit. These two sections are connected by refrigerant piping.

Refrigerant piping affects on system performance and reliability of compressor.

When planning the layout design of piping, consider following points;

Refrigerant piping length should be as short as possible.

There should be minimum possible bends in piping.

The internal surface of copper pipe should be free of dust, moisture and solid particles.

To avoid transmission of vibration into building,

The piping passing through wall/floor should not touch any structure.

Refrigerant lines should be properly clamped with 5 - 8 feet span.

### Liquid Lines

Liquid line is not critical for oil return because liquid refrigerant and oil circulate together.

Pitched or uneven copper pipe that may cause excessive pressure, should be avoided.

Liquid line passing through high temperature area should be insulated.

### Suction Lines

Suction line is very critical for the oil return.

Pressure drop in suction line directly affects the system performance.

Horizontal suction line should be pitched downward in the direction of refrigerant flow with downward pitch of  $\frac{1}{2}$  inch in 10 feet.

Vertical suction line more than 3 to 4 feet in height should have "P" trap at base to 'facilitate oil return'.

Long vertical suction lines should have additional trap at distance of 20 feet each.

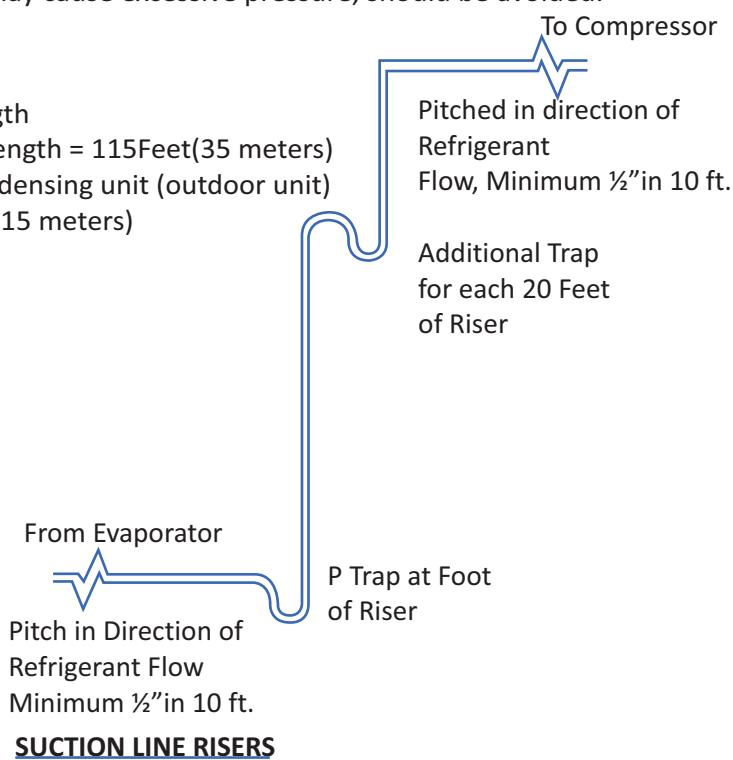

Pitched or uneven copper pipe that may cause excessive pressure, should be avoided.

All suction lines should be insulated.

#### Recommended Piping Height and Length

Maximum recommended equivalent length = 115Feet(35 meters)

Maximum height difference when condensing unit (outdoor unit) is located above indoor unit = 50Feet (15 meters)

**Equivalent Length Of Fittings**

It is not possible to specify one line size to cover all possible conditions which may be encountered. Each valve, fitting and bend in a refrigerant line contributes to friction / pressure drop because of its interruption or restriction of smooth flow. This restriction is converted to equivalent length of the pipe and is shown in Table-1.

Equivalent Length In FEET of Straight Pipe For Valves &amp; Fittings

Line Size OD	Globe Valve	Angle Valve	Elbow 90°	Elbow 45°	Tee Bines	Tee Branch
	5	3	5	0.2	0.3	1.0
1/2"	9	5	9	0.4	0.6	2.0
5/8"	12	6	1.6	0.5	0.8	2.5
3/4"	14	7	1.9	0.6	0.9	3.2
7/8"	15	8	2	0.7	1.0	3.5
1-1/8"	22	12	2.6	0.9	1.5	4.5
1-3/8"	28	15	3.3	1.2	1.8	6.0
1-5/8"	35	17	4	1.4	2.0	7.0

Calculate the equivalent length of the fitting and add to actual length of pipe to find the equivalent length of pipe. Select the pipe size from Tble-2 & Table-3.

Table-2: Recommended Liquid Line Sizes(Equivalent Length In Feet)

Size Of Copper Type L	3/8"	1/2"	5/8"	3/4"	7/8"	1-1/8"

**Note:**

Don't operate Evap fan **motor in dotted shade area** Range of E.S.P

Fan performance is based on wet coil and clean filter

RPM=Revolutions per minute

BHP=Brake Horse Power

Brake horsepower (BHP) is the amount of work generated by a motor under ideal conditions. This work is calculated without the consideration of the effects of any auxiliary component, that may slow down the

Metric/Imperial Unit Conversion Table

Imperial → Metric

Metric → Imperial

**Linear Measure (Length/Distance)**

Imperial	Metric
1 inch	25.4 millimetres
1 foot (=12 inches)	0.3048 metre
1 yard (=3 feet)	0.9144 metre
1 (statute) mile (=1760 yards)	1.6093 kilometres
1 (nautical) mile (=1.150779 miles)	1.852 kilometres

**Linear Measure (Length/Distance)**

Metric	Imperial
1 millimetre	0.0394 inch
1 centimetre (=10 mm)	0.3937 inch
1 decimetre (=10 cm)	3.937 inches
1 metre (=100 cm)	1.0936 yards
1 decametre (=10 m)	10.936 yards
1 hectometre (=100 m)	109.36 yards
1 kilometre (=1000 m)	0.6214 miles

**Square Measure (Area)**

Imperial	Metric
1 square inch	6.4516 sq. centimeters
1 square foot (=144 square inches)	9.29 square decimeters
1 square yard (=9 square feet)	0.8361 square metres
1 acre (=4840 square yards)	0.40469 hectare
1 square mile (=640 acres)	259 hectares

**Square Measure (Area)**

Metric	Imperial
1 square centimetre	0.1550 sq. inch
1 square metre (=10 000 sq. cm)	1.1960 sq. yards
1 are (=100 sq. metres)	119.60 sq. yards
1 hectare (=100 acres)	2.4711 acres
1 square kilometer (=100 hectares)	0.3861 sq. mile

**Cubic Measure (Volume)**

Imperial	Metric
1 cubic inch	16.4 cubic centimeters
1 cubic foot (=1728 cubic inches)	0.0283 cubic metres
1 cubic yard (=27 cubic feet)	0.765 cubic metres

**Cubic Measure (Volume)**

Metric	Imperial
1 cubic centimeter	0.0610 cubic inch
1 cubic metre (one million cu. cm)	1.308 cubic yards

**Capacity Measure (Volume)**

Imperial	Metric
1 (imperial) fl. oz. (=1/20 imperial pint)	28.41 ml
1 (US liquid) fl. oz. (=1/16 US pint)	29.57 ml
1 (imperial) gill (=1/4 imperial pint)	142.07 ml
1 (US liquid) gill (=1/4 US pint)	118.29 ml
1 (imperial) pint (=20 fl. imperial oz.)	568.26 ml
1 (US liquid) pint (=16 fl. US oz.)	473.18 ml
1 (US dry) pint (=1/2 quart)	550.61 ml
1 (imperial) gallon (=4 quarts)	4.546 litres
1 (US liquid) gallon (=4 quarts)	3.785 litres
1 (imperial) peck (=2 gallons)	9.092 litres
1 (US dry) peck (=8 quarts)	8.810 litres
1 (imperial) bushel (=4 pecks)	36.369 litres
1 (US dry) bushel (=4 pecks)	35.239 litres

**Capacity Measure (Volume)**

Metric	Imperial
1 millilitre	0.002 (imperial) pint
1 centilitre (=10 ml)	0.018 pint
1 decilitre (=100 ml)	0.176 pint
1 litre (=1000 ml)	1.76 pints
1 decalitre (=10 l)	2.20 (imperial) gallons
1 hectolitre (=100 l)	2.75 (imperial) bushels

**Mass (Weight)**

Imperial	Metric
1 grain	0.065 gram
1 dram	1.772 grams
1 ounce (=16 drams)	28.35 grams
1 pound (=16 ounces =7000 grains)	0.45359237 kilogram
1 stone (=14 pounds)	6.35 kilograms
1 quartet (=2 stones)	12.70 kilograms
1 hundred weight (=4 quarters =112 lb.)	50.80 kilograms
1 (long) ton (=2240 lbs)	1.016 tonnes
1 (short) ton (=2,000 lbs)	0.907 tonne

**Mass (Weight)**

Metric	Imperial
1 milligram	0.015 grain
1 centigram (=10 mg)	0.154 grain
1 decigram (=100 mg)	1.543 grain
1 gram (=1000 mg)	15.43 grain
1 decagram (=10 g)	5.64 drams
1 hectogram (=100 g)	3.527 ounces
1 kilogram (=1000 g)	2.205 pounds
1 tonne (=1000 kg)	0.984 (long) ton

# Sabro Airconditioning

Inspired by the ‘stimulus to grow’ through knowledge, interlaced with the zeal and sheer commitment of an enthusiastic team and gripped by the obsession of three brothers of turning the dream-into reality, **Sabro** has evolved, grown and expanded **since its inception in 1969.**

**For over five decades, Sabro has been a trusted brand name** that has exceeded expectations nationwide & internationally, catering to the needs of both domestic as well international customers.

Made In  
**PAKISTAN**  
Since 1969
